

## **Documentation Template**

**Please send your inputs to: [koshigenderportal@icimod.org](mailto:koshigenderportal@icimod.org)**

Note:

If you think you have implemented or researched successful practices/programmes on food, water and energy security that have contributed to positive change by either reducing existing gender gaps or promoting gender transformative change, please provide the information in the following template.

While presenting such successful programmes and initiatives, revisit the intervention and reflect on whether it has increased assets and services for women, poor and marginalized members of the society, and whether the increased level of assets and services enhanced people's agency and ability to influence customary as well as statutory rules that affect them. The hypothesis is that an intervention that has brought positive change in one or all three domains of life of poor women and men will have positive gendered impact.

**1. Title:** The title should convey the main message of the good practice

**2. Summary:** A short description of the intervention or initiative

**3. Transformative change achieved:**

3.1 How has the programme/intervention improved the level of assets and services for women, poor and marginalized members of the society?

3.2 Voice, influence and agency –

How has the increased level of assets and services enhanced the agency and ability of women and marginalised members to voice their concerns and influence customary as well as statutory rules that matter to them?

3.3 Changing the rules

How has the changes in the rules improved the level of assets and services?

**4. Author contact**

Information about the authors including name, address and email

**5. Revision**

Information about all previous versions of the successful practice

**6. Reviews**

Information about reviews of the good practice document with URLs or other pointers

## **Requirements for applying these good practices**

- 7. Means-** The means that are needed for applying the practice, including people and technology
- 8. Skills -** Skills and competencies required
- 9. Cost -** An estimation of the costs for applying the practice
- 10. Barriers -** Obstacles or problems that may occur before, during, and after applying these practices
- 11. Barrier management procedures** if certain obstacles problems are encountered
