Re-Announcement (Deadline Extended to 18 April 2025)

REQUEST FOR PROPOSALS

Provide turnkey services for the design, supply, installation, testing, and commissioning of Solar Photovoltaic (PV) Lift Irrigation Systems in Punakha, Bhutan

Background

The agriculture sector in Bhutan employs 60 percent of the total population, with women comprising 53 percent of the overall agriculture workforce. But with escalating climate shocks, among other factors, the sector's contribution to GDP has been declining steadily, and self-sufficiency in staple crops has reached a critical point. Without effective climate adaptation measures, agricultural output is projected to decline by 4–10 percent in the near future.

16% of Bhutan's agriculture is irrigated, and the irrigation systems are predominantly gravity-fed open channels, which are seasonal and highly vulnerable to climate change. Given the country's mountainous topography, lifting water from (river) source is a challenge. This challenge, counterposed against Bhutan's abundance of fast-flowing river water as potential renewable energy resources, presents a unique double-win opportunity of expanding irrigation coverage and strengthening green energy transition in irrigation sector simultaneously.

The Women Empowerment through Renewable Energy Powered Decentralised Lift Irrigation Systems in Bhutan (WERELIS – Bhutan) project, funded by the International Development Research Center (IDRC), Canada, is being jointly implemented by ICIMOD and the Department of Energy, Ministry of Energy and Natural Resources, Royal Government of Bhutan.

This project aims to generate evidence on the economic, environmental, social, and gender (equality) impacts of renewable energy (RE)-powered lift irrigation systems to support their wider adoption. By demonstrating how greener technologies can enhance agricultural productivity, WERELIS seeks to create employment opportunities for women, reduce emissions, and promote environmental sustainability.

About the Proposals

As a key component of the project ICIMOD plans to pilot two solar-powered lift irrigation systems, showcasing their relevance and viability for (i) improving irrigation access; and (ii) in enabling women to leverage new income opportunities as service providers and business development managers by training them in operation and maintenance/ management of these systems.

For this purpose, ICIMOD invites sealed bid proposals from reputable and qualified firms for the supply and installation of two solar photovoltaic (PV) lift irrigation systems. The scope of work includes turnkey services—design, supply, installation, and/ commissioning (including training of local operators for proper system use). The installations will take place in two locations in Bhutan: (i) Humpatang (Ngyedrupchu), Chhubu Gewog, Punakha, and (ii) Temakha, Chhubu Gewog, Punakha.

Bidding process

Submission Guidelines

1. Interested suppliers may submit their sealed bid proposals to Procurement Unit of ICIMOD. The hardcopies of the sealed bid must be submitted to ICIMOD in the address provided for the international bidders. For Bhutanese bidders, the sealed bids to be submitted to Department of Energy, Ministry of Energy and Natural Resources, Thimphu Bhutan. Proposals must be submitted as per the RFP guidelines by **5 PM BST (Bhutanese firms) / 5 PM NST (international firms), 18 April 2025**. Two separate sealed envelopes containing technical and financial proposals should be submitted in a single sealed envelope. ICIMOD reserves the right to accept or reject any proposals without explanation.

2. **Pre-bid Meeting:** An online pre-bid meeting will be held on 15 **April 2025**. All interested and eligible firms wishing to attend the pre-bid meeting are required to submit an Expression of Interest (EOI) via email to procurement@icimod.org no later than **14 April 2025**.

EOI must be printed on the company's official letterhead, signed by an authorized representative, and accompanied by a valid company registration certificate.

Only firms that submit the EOI in the required format will be invited to join the online pre-bid meeting. Further details, including the meeting link and agenda, will be shared with the confirmed participants in due course.

3. ICIMOD Postal Address

Khumaltar, Lalitpur, Kathmandu, Nepal. G.P.O. Box 3226. Phone +977 1 527-5238, 5275239.

- 4. In addition to the proposal documents, the bid should include copies of the following supporting documents:
 - Company registration certificate
 - Tax clearance certificate of the most recent financial year (FY 23/24)
 - Manufacturer's authorization certificate/letter
 - Schedule and timeline for delivery
 - Guarantee/warranty
 - $\circ~$ Bid validity period of at least 3 months from the date of submission
 - documents requested in the bid including -Make/brand,
 brochure/catalogue, etc of goods offered, drawings, design sheets etc.
 - Reference of at least one similar project of installing a solar water pumping system (both electromechanical and civil components) accomplished by the bidder during the last three years.
- 5. The bidder shall quote the item rates in USD inclusive of all taxes in a formal quotation with signature and stamp (please refer to the sample in Part VI).
- 6. The bidder is liable to pay the applicable tax in accordance with the income tax laws of the Royal Government of Bhutan in the case of local supply.

Bidders are encouraged to visit the site before making the bid. ICIMOD is not liable for the cost of preparation of the bid.

For any queries or clarifications regarding the bidding process, please contact the ICIMOD Procurement Unit at <u>procurement@icimod.org</u> or call +977-5275222, extn 610, before the submission deadline.

Terms of Reference

Objective

The objective of the assignment is to install two (pilot) solar PV lift irrigation systems in two locations in Punakha. A **complete** installation will involve two tranches of activities: (i) design, supply and construction of civil components and electromechanical components, and (ii) training and support to the local community operator to operate and manage the systems.

1. Scope of Work

The scope of work and main responsibilities of the contractor includes providing turnkey services for **two** solar lift irrigation systems in (i) Humpatang (Ngyedrupchu), Chubbu Gewog, Punakha and (ii) Temakha, Chhubu Gewog, Punakha. The detailed scope of work includes but not limited to the following :

- 1. **Install solar lift irrigation systems:** Based on the guiding design provided by ICIMOD, bidders need to submit a design, with supporting documents, for the installation of two solar lift irrigation systems. Provide the turnkey supply and installation service shall include but not limited to the following:
 - a. Tasks for civil components would include the following which are subject to the guiding design described for each site and its site conditions:
 - i. Site clearance and levelling where required
 - ii. Construction of pump intake infrastructures, such as gabion walls, sump well, and filtration mechanisms.
 - iii. Construction of pump house.
 - iv. Laying of pipe works such as water transmission and distribution lines.
 - v. Construction of water distribution chambers that house gate valves for water control.
 - vi. Construction of crossing structure for pipe works over streams.
 - vii. Installation of the complete set of plumbing works (gate valves in nodal points, pipeline, pump fitting, check valves, to name a few).
 - b. Tasks for electromechanical components would include the following which are subject to the guiding design described for each site and its site conditions:
 - i. Installation of the solar PV arrays including civil works.
 - ii. Installation of the controllers and pumps.
 - iii. Complete sets of cables, conduits, connectors, and other accessories are required to make the system functional.
 - iv. Installation of isolation and protection equipment (such as MCBs, SPDs, earthing and lightning protection).
 - v. Installation of GSM-based monitoring systems.
 - c. Training the community-based operator
 - i. Providing training to the community-based operator on the proper use and management of the solar water pumping system, including safety aspects.
- 2. Coordinate with ICIMOD to review the installation works during the execution of the contract.
- 3. Prepare a testing and commissioning form and conduct a thorough testing and commissioning of the solar lift irrigation systems to verify their performance, functionality, and compliance with local standards before fullscale operation. Submit the testing and commissioning forms along with 2day system performance data to ICIMOD for review.

- 4. Implementing corrections/changes to the system and reporting back based on the feedback provided by ICIMOD after the testing and commissioning forms are reviewed.
- 5. Once the testing and commissioning forms are approved, the contractor is required to develop a detailed operation and maintenance training programme for the local operator nominated by the community. Following ICIMOD's approval of the training content, conduct the training for the operators.
- 6. Handover documentation specified in the technical specifications (see 'Handover documents' at the end of Part III).
- 7. Providing a post-installation after-sales service and monitoring plan.

Please refer to Part III for the specifications of each component.

2. Contents of the technical proposal

Applicants are advised to present their technical proposal in three sections:

1) Technical approach and methodology

Applicants should submit their proposed design with drawings, design calculations, and supporting technical documents of the installations of **two** solar lift irrigation systems. The proposal should include a single line diagram of the proposed configuration.

2) Work plan.

The proposal should include a work plan, that includes the project's duration, interim milestones, and the delivery date, and which aligns with the technical approach and methodology.

3) Relevant experience

Applicants should provide details of their organization's relevant experience. The technical proposal will be evaluated based on how well it is aligned with the terms of reference using the specified evaluation criteria.

S.	Criteria	Supporting documents
No		
1	The bidder should be legally registered in their	Registration document
	base country	
2	The bidder should have an average annual	Audited financial
	turnover of USD 100,000 in any three of the last	statement
	five financial years	

3. Pre-qualification criteria

3	The bidder should have carried out at least one	Work order or work
	similar project of installing a solar lift	completion certificate
	irrigation system (both electromechanical and	
	civil components) accomplished by the bidder	
	during the last five years.	
4	The bidder should not have been blacklisted or	Self-declaration
	barred or have any such cases of	
	blacklisting/debarment pending in any court of	
	law	

4. Evaluation Criteria

Bids will be evaluated based on the following criteria:

- 1) All the technical specification has to be duly filled as required. Only technically qualified proposals will be deemed eligible for financial opening.
- 2) The contract will be awarded to the technically qualified lowest bidder.
- 3) The International or Regional bidder will require to partner with local firm for providing post installation support services. The bidder should also submit the agreement drawn with the local partner detailing the roles and responsibilities of the partnership agreed between the firm and the local partner.
- 4) Should have experience of constructing the sump well providing the discharge of at least 200 m³/day.

5. Timelines for deliverables

detai	ls for a fully functional	
syste	m.	

Civil: Gabion walls

SN	Specifications required	Details with compliance	Reference document
		(fill in the	provided
)	(Yes/No)
1	Gabion walls shall be constructed to	Agree to	
	protect the pump intake in both sites (see	complete	
	Figure 6 Figure 7and Figure 13).	construction	
	Construction of gabion wall as per	of the gabion	
	drawings with dry stone masonry	wall	
	(hammer dressed facing) including	including all	
	excavation of foundation in all types of	requirements	
	soils, sides and backfilling, delivery of	(Yes/No):	
	machine woven gabion mesh (Hexagonal	•••••	
	mesh of size 100mm x 120mm with a		
	minimum of doubly twisted) with GI wire		
	2.70mm dia including diaphragm, fixing		
	of selvedged wire 3.4 mm dia,		
	binding/lacing wire 2.40 mm dia		
	complete - Height up to 2 m		
	No. of gabion walls: 1 nos.		

Civil: Pump intake and pump housing

SN	Specifications required	Details with compliance (fill in the)	Reference document provided (Yes/No)
1	Erection of 4 metal pipes at the end of the pump suction to support the suction pipe (see Figure 13)	Agree to complete erection of suction pipe support including all	

		requirements (Yes/No):	
2	The suction pipe of the pump shall	HDPE (Yes/No):	
	be HDPE and match the suction		
	diameter of the surface pump	Length of pump suction	
		pipe: m	
3	A foot valve shall be installed at	Foot valve included	
	the end of the suction pipe to	(Yes/No):	
	prevent the return of water back to		
	the river		
4	Construction of pump house	Agree to complete the	
	providing & fixing Corrugated	construction of the	
	Galvanised Iron (CGI) sheeting,	pump house including	
	including bolts, hooks and nuts	all requirements	
	8mm dia. with bitumen and G.I	(Yes/No):	
	limpet washers filled with white		
	lead for connection, excluding the		
	cost of purlins, rafter and trusses -		
	24g (see Figure 12Figure 12		
	Steel work welded, in built up		
	sections, trusses, frameworks		
	including cutting, hoisting, fixing		
	and applying priming coat of red		
	lead paint - In Tubular sections		
	Providing and laying in position		
	plain cement concrete 1:2:4 (1		
	cement: 2 sand: 4 crushed rock 20		
	mm nominal size) excluding the		
	cost of centering and shuttering -		
	All work upto plinth level.		

Civil: Distribution Chamber

SN	Specifications required	Details with	Reference
		compliance	document
		(fill in the	provided
)	(Yes/No)
1	Construction of a distribution chamber	Agree to complete	
	to house gate valves and	the construction of	
	control/distribute water to the	the distribution	
	agricultural plots (see Figure 8)	chamber including	
		all requirements	
	Earthwork: Earthwork in excavation	(Yes/No):	
	over areas, depth >300mm, width >1.5m,		
	area >10 Sq.m on plan, including		
	disposal of excavated earth within 50m		
	lead and 1.5m lift & disposed soil to be		
	neatly dressed - All types of Soil		
	Filling of trenches, sides of foundations		
	etc. in layers <200mm using selected		
	excavated earth, ramming etc. within		
	lead 50 m & lift 1.5m		
	Concrete work: Providing and laving in		
	position plain cement concrete 1.2.4 (1		
	cement: 2 sand : 4 crushed rock 20 mm		
	nominal size) excluding the cost of		
	centering and shuttering - All work upto		
	plinth level.		
	1		
	Reinforced concrete work: P&L in		
	position reinforced cement concrete		
	1:1.5:3 (1 cement: 1.5 sand: 3 graded		
	crushed rock 20 mm nominal size) work		
	in plinth and skirting courses, fillets,		
	columns , pillars, posts and struts upto		
	floor five level excluding the cost of		
	centering, shuttering and		
	reinforcement.		
	Providing & fixing centering and		
	snuttering with timber including		

strutting propping atc. and removal of	
formwork - Foundation and plinth etc.	
Providing & fixing Thermo-Mechanically	
Treated reinforcement bar (Yield	
Strength 500 MPa) for R.C.C work	
including cutting, bending, binding and	
placing in position complete	
Brick work: P&L Second-Class Brick	
work in Foundation & Dlinth In compart	
work in Foundation & Pintin - in cement	
mortar 1:4	
Stonework: Providing and laying	
Hammer dressed dry stone soling	
Plastering work: P&L 15mm cement	
plaster on rough side of single or half-	
huid mall CM1.4 in aluding motor	
Drick wall - C.M 1:4 including water-	
proofing materials in proportion	
recommended by the manufacturers	

Civil: Water transmission and distribution

SN	Specifications required	Details with compliance (fill in the)	State whether reference document has been provided (Yes/No)
1	Water transmission from pump to the distribution chamber: Refer Figure 6. HDPE pipe 65 mm diameter PN6: 110 m length	HDPE pipe 65 mm PN6: 110 m? (Yes/No) Pipe fittings included? (Yes/No)	
	Including all pipe fittings required for matching pump connection and water transmission		

2	Water distribution:		
		HDPE pipe 65 mm PN4: 250	
	Distribution line 1, HDPE pipe	m included? (Yes/No)	
	65mm diameter PN4: 150 m		
	length	Pipe fittings included?	
		(Yes/No)	
	Distribution line 2, HDPE pipe		
	65 mm diameter PN4: 100 m		
	length		
3	Water distribution:	No. of gate valves included:	
	Refer Figure 6.	nos.	
	Four gate valves in the		
	distribution chamber. One for	Pipe fittings included?	
	incoming flow (from pump)	(Yes/No)	
	and three for distribution.		
	The gate valves shall match the		
	pipe diameters.		
4	Two T-joints for water output	2 T-joints with fittings	
	along the distribution line	includes? (Yes/No)	
5	Construct crossing structures	Agree to complete the	
	for pipe crossing over a stream	construction of the crossing	
	(see Figure 9)	structure including all	
		requirements (Yes/No):	

Note: All the necessary civil works required to complete this assignment, as determined by the site conditions and the proposed system configuration, will be the responsibility of the contractor and are considered included in the quoted rate.

Workmanship

S. No	Specifications required	Details with compliance (fill in the)	Reference document provided (Yes/No)
1	5 years' warranty on workmanship	Compliance (Yes/No):	NA
2	The bidder shall ensure that all worksites shall be free of debris resulting from the construction activity	Compliance (Yes/No):	NA

3	Separate earthing should be	Compliance with separated	
	given to,	earthings:	
	3. Lightning air terminal		
	4. PV array, DC SPD,	(Yes/No):	
	structure, controller		
		Length of earthing rod:	
	Rod earthing with copper rod	m	
	size (for individual earthing):		
	1 no. of each minimum 2.5	Diameter of earthing rod:	
	meters length x 25mm	mm	
	diameter		
	Down conductor size: 25 mm		
	wide and 3 mm thick copper		
	strip		
	Equipment bonding shall be		
	used to tie the casings of all		
	equipment and enclosures,		
	including all electronic		
	equipment casings (such as		
	control box and inverters),		
	combiner boxes with an earth		
	cable of at least 16 sq. mm and		
	connected via an insulated,		
	stranded copper earth wire of		
	at least 16 sq. mm connected to		
	an earth electrode.		
	Backfill compound: 2 nos. of		
	each 25Kg		
4	Separation between individual		
	earth pits should be at least 10	Compliance (Yes/No):	
	meters		

5	The Lightning Protection	Length of air terminal:	
	System (LPS) must be able to	m	
	minimize the damage to the	Diameter of air terminal:	
	surrounding environment	mm	
		Compliance with the height	
	Copper air terminal at least 2m	of the air terminal above the	
	above the highest height of the	highest height of the solar	
	solar panels after installation	panels after installation:	
		(Yes/No):	
6	The maximum allowable earth	Compliance (Yes/No):	
	resistance is 10 ohms		
7	The bidder must submit the	Datasheets provided?	
	technical datasheet of the	(Yes/No)	
	SPDs and MCBs.		
8	Safety cards and signages near	Safety cards and signages	
	the controller side and panel	will be provided near the	
	area	controller? (Yes/No):	
		Safety card will be provided	
		near the solar panel area?	
		(Yes/No):	
		Content of safety cards will	
		cover emergency	
		procedures, warning signs,	
		and safety handling.	
		(Yes/No):	

Single line diagram

S. No	Specifications required	Details with compliance	Reference document
		(fill in the	provided
1	The bidder must submit single line diagram (SLD)s of the entire electromechanical arrangement specified in this RfP. It shall include solar array, inverter, and pump, along with balance of systems (cables, protection, control box etc.) showing necessary details for a fully functional system.	Single line diagrams (SLD) of the entire system provided? (Yes/No)	

Civil: Gabion walls

SN	Specifications required	Details with	Reference
		(Gill in the	document
		(fill in the)	provided
			(Yes/No)
1	Gabion walls shall be constructed to	Agree to complete	
	protect the pump intake in both sites	construction of the	
	(Figure 7).	gabion wall	
		including all	
	Construction of gabion wall as per	requirements	
	drawings with dry stone masonry	(Yes/No):	
	(hammer dressed facing) including		
	excavation of foundation in all types of		
	soils, sides and backfilling, delivery of		
	machine woven gabion mesh		
	(Hexagonal mesh of size 100mm x		
	120mm with a minimum of doubly		
	twisted) with GI wire 2.70mm dia		
	including diaphragm, fixing of		
	selvedged wire 3.4 mm dia,		
	binding/lacing wire 2.40 mm dia		
	complete - Height up to 2 m		
	No. of gabion walls: 2 nos.		

Civil: Sump well

SN	Specifications required	Details with compliance (fill in the	Reference document provided
			(Yes/No)
1	Construction of a sump well of total 7.9	Agree to complete	
	m depth and 2 m inner diameter (see	the construction of	
	Figure 10, Figure 11)	the sump well	
		including all	
	Earthwork in excavation over areas,	requirements	
	depth >300mm, width >1.5m, area >10	(Yes/No):	
	Sq.m on plan, including disposal of		

excavated earth within 50m lead and 1.5m lift & disposed soil to be neatly dressed - All types of Soil	
Filling of trenches, sides of foundations etc. in layers <200mm using selected excavated earth, ramming etc. within lead 50 m & lift 1.5m	
P&L in position reinforced cement concrete 1:1.5:3 (1 cement: 1.5 sand: 3 graded crushed rock 20 mm nominal size) work in plinth and skirting courses, fillets, columns, pillars, posts and struts upto floor five level excluding the cost of centering, shuttering and reinforcement.	
Providing & fixing centering and shuttering with timber including strutting, propping etc. and removal of formwork - Foundation and plinth etc.	
Providing & fixing Thermo- Mechanically Treated reinforcement bar (Yield Strength 500 MPa) for R.C.C work including cutting, bending, binding and placing in position complete	
Providing and laying dry hand packed rubble masonry with stone boulders >0.04 Cu.m	
P&L Perforated H.D.P.E pipes, PN 12.5, (excluding trenching, refilling & thrust block) -110mm	
P&L Non Woven Geotextile Material	

Well Casing: Placing of well rings in	
well pit using all necessary equipment,	
all complete.	

Civil: Distribution Chamber

SN	Specifications required	Details with compliance	Reference
		(fill in the)	provided
			(Yes/No)
1	Construction of a distribution chamber to house gate valves and control/distribute water to the	Agree to complete the construction of the distribution	
	agricultural plots (see Figure 8)	chamber including all requirements	
	Earthwork: Earthwork in excavation over areas, depth >300mm, width >1.5m, area >10 Sq.m on plan, including disposal of excavated earth within 50m lead and 1.5m lift & disposed soil to be neatly dressed - All types of Soil	(Yes/No):	
	Filling of trenches, sides of foundations etc. in layers <200mm using selected excavated earth, ramming etc. within lead 50 m & lift 1.5m		
	Concrete work: Providing and laying in position plain cement concrete 1:2:4 (1 cement: 2 sand : 4 crushed rock 20 mm nominal size) excluding the cost of centering and shuttering - All work upto plinth level.		
	Reinforced concrete work: P&L in position reinforced cement concrete 1:1.5:3 (1 cement: 1.5 sand: 3 graded crushed rock 20 mm nominal size) work in plinth and skirting courses, fillets, columns, pillars, posts and		

struts upto floor five level excluding	
the cost of centering, shuttering and	
reinforcement.	
Providing & fixing centering and	
shuttering with timber including	
strutting, propping etc. and removal of	
formwork - Foundation and plinth etc.	
Providing & fixing Thermo-	
Mechanically Treated reinforcement	
bar (Yield Strength 500 MPa) for R.C.C	
work including cutting, bending,	
binding and placing in position	
complete	
Brick work: P&L Second-Class Brick	
work in Foundation & Plinth - In	
cement mortar 1:4	
Stonework: Providing and laying	
Hammer dressed dry stone soling	
Plastering work: P&L 15mm cement	
plaster on rough side of single or half-	
brick wall - C.M 1:4 including water-	
proofing materials in proportion	
recommended by the manufacturers	

Civil: Water transmission and distribution

SN	Specifications required	Details with compliance (fill in the)	State whether reference document has been provided (Yes/No)
1	Water transmission from pump to the distribution chamber:	HDPE pipe 110 mm PN6: 230 m? (Yes/No)	

	Refer Figure 7.	Pipe fittings included?	
		(Yes/No)	
	HDPE pipe 110 mm diameter		
	PN6: 230 m length		
	Including all pipe fittings		
	required for matching pump		
	connection and water		
	transmission		
2	Water distribution:	HDPE pipe 110 mm PN2.5:	
		280 m included? (Yes/No)	
	Distribution line 1, HDPE pipe	•••••	
	110 mm diameter PN2.5: 60 m		
	length	Pipe fittings included?	
		(Yes/No)	
	Distribution line 2, HDPE pipe		
	110 mm diameter PN2.5: 100 m		
	length		
	Distribution line 2 HDDE pipe		
	110 mm diameter PN2 5: 120 m		
	length		
3	Water distribution:	No. of gate valves included:	
	Refer Figure 7.		
	Five gate valves in the	Pipe fittings included?	
	distribution chamber. One for	(Yes/No)	
	incoming flow (from pump)		
	and four for distribution.		
	The gate valves shall match the		
	pipe diameters.		
5	Construct crossing structures	Agree to complete the	
	for pipe crossing over a stream	construction of the crossing	
	(see Figure 9)	structure including all	
		requirements (Yes/No):	

Note: All the necessary civil works required to complete this assignment, as determined by the site conditions and the proposed system configuration, will be the responsibility of the contractor and are considered included in the quoted rate.

Workmanship

S.	Specifications required	Details with	Reference
NO		(fill in the)	provided (Yes/No)
1	5 years' warranty on workmanship	Compliance (Yes/No):	NA
2	The bidder shall ensure that all worksites shall be free of debris resulting from the construction activity	Compliance (Yes/No):	NA
3	Any existing infrastructure temporarily dismantled for site access purposes (for example, fencing) must be reinstated upon completion of work	Compliance (Yes/No):	NA

Handover documents

The bidder shall hand over a folder upon commissioning to the client that contains at least the following:

Component	Supporting documents
Solar panels	Technical datasheet
Inverters	Technical data sheet and manufacturer
	operation and troubleshooting manual
Pumps	Technical data sheet and manufacturer
	operation and troubleshooting manual
Overall solar lift irrigation systems	Single line diagrams
Workmanship warranty	Workmanship of 5 years warranty letter

Part V: Manufacturer's authorization letter format

[This letter of authorization should be on the manufacturer's letterhead and be signed by the person with the authority to sign documents that are binding on the manufacturer] Date:

То:

WHEREAS

We [insert the complete name of the manufacturer], who are official manufacturers of [insert the complete name of the product], having factories at [insert full address of the manufacturer's factories], do hereby authorize [insert the complete name of the bidder] exclusively to submit a bid in relation to the Request for Proposals indicated above, the purpose of which is exclusively to provide the following goods, manufactured by us [insert the complete name of the manufacturer] and to subsequently negotiate and sign the contract.

We hereby extend our full guarantee and warranty in accordance with requirements described in the Technical Specifications, with respect to the goods offered by the above firm.

Signed: [insert complete name of Bidder]

Name: [insert complete name(s) of authorized representative(s) of the manufacturer] Title: [insert title] Duly authorized to sign the authorization for and on behalf of: [insert complete name(s) of authorized representative(s) of the manufacturer] Date: [insert date of signing]

Part VI: Bill of quantity

The bidder shall use the following format to provide details regarding quantity and costs.

Humpatang site

SN	Items description	Capacity/description	Qty	Unit	Total (USD)
Elect	romechanical components				
1	Solar panels	At least 5 kWp	As required	Wp	
2	Mounting structure	GI structure	1	set	
3	Remote monitoring Unit		1	nos.	
4	Controller	MPPT controller, compatible with the solar array arrangement and pump	1	nos.	
5	Pump	At least 5HP (for DC surface pump)	1	nos.	
		MCB: DP, 16 A			
6	DC MCBs and SPDs	Type II SPD		nos.
